

Data science pledge

I, LIYUJIE, as a Master student majoring in data science, hereby pledge:

I will practice my profession with the highest level of integrity and competence and I will always use my skills for the public good.

I will analyze problems, assumptions and results objectively and look at problems from different perspectives and angles. When I find a problem, I use my expertise to find efficient ways to get the right answer.

I will face up to my shortcomings bravely and I will keep learning to improve myself and make my skills more and more skilled. Let oneself have the ability to think and solve problems independently.

Finally, I assure you that my position is legitimate.
